

# Mike

The flexible d-flexx kerb barrier Mike is the ideal product to protect walls and assembly lines from collision in low ground areas.

The round shape allows the colliding forklift to bounce off the barrier, therefore absorbing the force. It functions as a guide throughout the installed area. A key advantage is that it is possible to be combined with almost all of our other d-flexx products.

Compatible with the following products: Charlie, Delta, Echo and Golf.

The height of the kerb barrier is 140 mm.
